Forensic Science International, 50 (1991) 289–291
Elsevier Scientific Publishers Ireland Ltd.

SUBJECT INDEX
Volume 50 (1991)

ageing, bruises, skin, 227
age estimation, forensic odontology, attrition area, attrition number, computer assisted image analyzer, multiple stepwise regression analysis, 97
alcohol, family violence, Chinese, Indian, 43
alcohol determination, high performance liquid chromatography (HPLC), methanol, body distribution, poisoning, 255
amide band absorption ratios, hair, Fourier transform infrared spectra, 61
amphetamine analogues, urinalysis, immunoassay, gas chromatography/mass spectrometry, 153
anion chromatography, explosives residues, low explosives, chlorate mixtures, swabs, 217
antibody production, semen identification, prostate-specific antigen, enzyme-linked immunosorbent assay, 125
attrition area, forensic odontology, attrition number, computer assisted image analyzer, multiple stepwise regression analysis, age estimation, 97
attrition number, forensic odontology, attrition area, computer assisted image analyzer, multiple stepwise regression analysis, age estimation, 97

biology, identification of saliva stain, specific activity of amylase, 37
bloodstains, transferrin (TF) subtyping, semen, isoelectric focusing, immunoblotting, 187
blood grouping, oral bacteria, forensic medicine, teeth, 263
body distribution, high performance liquid chromatography (HPLC), alcohol determination, methanol, poisoning, 255
brain trauma, courtroom evidence, postmortem MRI, 179
bruises, ageing, skin, 227

calcium, skin injuries, magnesium, zinc fluctuations, time, 67
cannabis, drugs, impairment, poly-drug use, 57
cannabis, EMIT, method, screening, tetrahydrocannabinol, 121
Chinese, family violence, Indian, alcohol, 43
chlorate mixtures, anion chromatography, explosives residues, low explosives, swabs, 217
chlorpromazine, ESR, spectrophotometry, 2,3-dichloro-5,6-dicyano-*p*-benzoquinone, 167
classification, extraction, dyes, fibres, cotton, viscose, 23
common origin, heroin, comparative analysis, 47
comparative analysis, heroin, common origin, 47
compound action potentials, rat, sciatic nerve, post-mortem period, 75
computer assisted image analyzer, forensic odontology, attrition area, attrition number, multiple stepwise regression analysis, age estimation, 97
constriction mark reaction, ligature mark, eosinophilia, fuchsinophilia, perinuclear space, modified Poley's acid fuchsin-methyl green staining, 147
cotton, extraction, classification, dyes, fibres, viscose, 23
courtroom evidence, postmortem MRI, brain trauma, 179

dibucaine, local anaesthetics, lidocaine, procaine, mass spectrometry, Sep-Pak C_{18} cartridges, wide-bo e capillary gas chromatography, 239
2,3-dichloro-5,6-dicyano-*p*-benzoquinone, chlorpromazine, ESR, spectrophotometry, 167
drugs, cannabis, impairment, poly-drug use, 57
dyes, extraction, classification, fibres, cotton, viscose, 23

EMIT, cannabis, method, screening, tetrahydrocannabinol, 121
enzyme-linked immunosorbent assay, semen identification, prostate-specific antigen, antibody production, 125

eosinophilia, ligature mark, constriction mark reaction, fuchsinophilia, perinuclear space, modified Poley's acid fuchsin-methyl green staining, 147
ESR, chlorpromazine, spectrophotometry, 2,3-dichloro-5,6-dicyano-*p*-benzoquinone, 167
estimation of age, image analysis, forensic odontology, 195
explosives residues, anion chromatography, low explosives, chlorate mixtures, swabs, 217
extraction, classification, dyes, fibres, cotton, viscose, 23

family violence, Chinese, Indian, alcohol, 43
fibres, extraction, classification, dyes, cotton, viscose, 23
fibres, recovery, persistence, 111
fibrin network, scanning electron microscope, skull fracture, microfracture, 1
fingerprinting, liquid crystals, fingerprint identification, 87
fingerprint identification, fingerprinting, liquid crystals, 87
foot prints, forensic anthropology, personal identification, stature, 203
forensic anthropology, personal identification, foot prints, stature, 203
forensic medicine, oral bacteria, blood grouping, teeth, 263
forensic odontology, attrition area, attrition number, computer assisted image analyzer, multiple stepwise regression analysis, age estimation, 97
forensic odontology, estimation of age, image analysis, 195
Fourier transform infrared spectra, hair, amide band absorption ratios, 61
fuchsinophilia, ligature mark, constriction mark reaction, eosinophilia, perinuclear space, modified Poley's acid fuchsin-methyl green staining, 147

gas chromatography-mass spectrometry, urinary cannabinoid analysis, immunoassay, 15
gas chromatography/mass spectrometry, urinalysis, immunoassay, amphetamine analogues, 153

hair, Fourier transform infrared spectra, amide band absorption ratios, 61
heroin, comparative analysis, common origin, 47
heroin addicts genotoxicity, melphalan, hyperthermia, 269
high performance liquid chromatography (HPLC), alcohol determination, methanol, body distribution, poisoning, 255
hyperthermia, heroin addicts genotoxicity, melphalan, 269

identification of saliva stain, biology, specific activity of amylase, 37
image analysis, estimation of age, forensic odontology, 195
immunoassay, urinalysis, gas chromatography/mass spectrometry, amphetamine analogues, 153
immunoassay, urinary cannabinoid analysis, gas chromatography-mass spectrometry, 15
immunoblotting, transferrin (TF) subtyping, bloodstains, semen, isoelectric focusing, 187
impairment, cannabis, drugs, poly-drug use, 57
Indian, family violence, Chinese, alcohol, 43
isoelectric focusing, transferrin (TF) subtyping, bloodstains, semen, immunoblotting, 187

lidocaine, local anaesthetics, procaine, dibucaine, mass spectrometry, Sep-Pak C_{18} cartridges, wide-bore capillary gas chromatography, 239
ligature mark, constriction mark reaction, eosinophilia, fuchsinophilia, perinuclear space, modified Poley's acid fuchsin-methyl green staining, 147
liquid crystals, fingerprinting, fingerprint identification, 87
local anaesthetics, lidocaine, procaine, dibucaine, mass spectrometry, Sep-Pak C_{18} cartridges, wide-bore capillary gas chromatography, 239
low explosives, anion chromatography, explosives residues, chlorate mixtures, swabs, 217

magnesium, skin injuries, calcium, zinc fluctuations, time, 67
mass spectrometry, local anaesthetics, lidocaine, procaine, dibucaine, Sep-Pak C_{18} cartridges, wide-bore capillary gas chromatography, 239
melphalan, heroin addicts genotoxicity, hyperthermia, 269

methanol, high performance liquid chromatography (HPLC), alcohol determination, body distribution, poisoning, 255
method, cannabis, EMIT, screening, tetrahydrocannabinol, 121
microfracture, scanning electron microscope, skull fracture, fibrin network, 1
modified Poley's acid fuchsin-methyl green staining, ligature mark, constriction mark reaction, eosinophilia, fuchsinophilia, perinuclear space, 147
multiple stepwise regression analysis, forensic odontology, attrition area, attrition number, computer assisted image analyzer, age estimation, 97

oral bacteria, blood grouping, forensic medicine, teeth, 263

perinuclear space, ligature mark, constriction mark reaction, eosinophilia, fuchsinophilia, modified Poley's acid fuchsin-methyl green staining, 147
persistence, fibres, recovery, 111
personal identification, forensic anthropology, foot prints, stature, 203
poisoning, high performance liquid chromatography (HPLC), alcohol determination, methanol, body distribution, 255
poly-drug use, cannabis, drugs, impairment, 57
post-mortem period, compound action potentials, rat, sciatic nerve, 75
postmortem MRI, courtroom evidence, brain trauma, 179
procaine, local anaesthetics, lidocaine, dibucaine, mass spectrometry, Sep-Pak C_{18} cartridges, wide-bore capillary gas chromatography, 239
prostate-specific antigen, semen identification, antibody production, enzyme-linked immunosorbent assay, 125

rat, compound action potentials, sciatic nerve, post-mortem period, 75
recovery, fibres, persistence, 111

scanning electron microscope, skull fracture, microfracture, fibrin network, 1
sciatic nerve, compound action potentials, rat, post-mortem period, 75
screening, cannabis, EMIT, method, tetrahydrocannabinol, 121
semen, transferrin (TF) subtyping, bloodstains, isoelectric focusing, immunoblotting, 187
semen identification, prostate-specific antigen, antibody production, enzyme-linked immunosorbent assay, 125
Sep-Pak C_{18} cartridges, local anaesthetics, lidocaine, procaine, dibucaine, mass spectrometry, wide-bore capillary gas chromatography, 239
skin, bruises, ageing, 227
skin injuries, magnesium, calcium, zinc fluctuations, time, 67
skull fracture, scanning electron microscope, microfracture, fibrin network, 1
specific activity of amylase, biology, identification of saliva stain, 37
spectrophotometry, chlorpromazine, ESR, 2,3-dichloro-5,6-dicyano-*p*-benzoquinone, 167
stature, forensic anthropology, personal identification, foot prints, 203
swabs, anion chromatography, explosives residues, low explosives, chlorate mixtures, 217

teeth, oral bacteria, blood grouping, forensic medicine, 263
tetrahydrocannabinol, cannabis, EMIT, method, screening, 121
time, skin injuries, magnesium, calcium, zinc fluctuations, 67
transferrin (TF) subtyping, bloodstains, semen, isoelectric focusing, immunoblotting, 187

urinalysis, immunoassay, gas chromatography/mass spectrometry, amphetamine analogues, 153
urinary cannabinoid analysis, immunoassay, gas chromatography-mass spectrometry, 15

viscose, extraction, classification, dyes, fibres, cotton, 23

wide-bore capillary gas chromatography, local anaesthetics, lidocaine, procaine, dibucaine, mass spectrometry, Sep-Pak C_{18} cartridges, 239

zinc fluctuations, skin injuries, magnesium, calcium, time, 67
